When I met my breast nurse, she quickly became and would continue to be my breath of fresh air. Courage has a whole different meaning to me now that I am a breast cancer survivor.

Expert care with a personal touch

In our state-of-the-art Cancer Care Center at Pomona Valley Hospital Medical Center, we balance the best in medical technology and innovative treatments with the best in personalized care. From prevention and early diagnosis to control of advanced disease, we have the expertise and compassion you need, provided in a warm and supportive environment.

Our multidisciplinary team of specialists holds weekly conferences to plan your individualized treatment, ensuring you're receiving the absolute best care. Unique to our program is a full-time Breast Navigator to guide you through your journey, from diagnosis to treatment and follow-up.

SCREENING AND DIAGNOSIS

We offer a variety of powerful capabilities to detect breast cancer early. These include Tomosynthesis (3D mammography), which is simply the best, most accurate breast cancer screening available. Much more precise than traditional 2D mammography, this advanced screening is offered to every woman, every time. Amazingly clear 3D images reveal breast tumors when they're small and easier to treat. This improved accuracy especially benefits women with dense breast tissue and women with implants. It also reduces false positives and callbacks for more tests, which means less stress and more peace of mind for you.

In addition to Tomosynthesis, our screening and diagnostic tools include breast ultrasound, breast MRI and stereotactic biopsy. We also offer genetic risk education, to help determine your risk of inherited breast disease.

Our expert care has earned our Breast Health Center accreditation as a Center of Excellence by the American College of Radiology.

I've been blessed by the breast cancer treatment I received and it's been deeply rewarding for me to give back to the hospital as a volunteer and a donor.

— Marilyn Gautreau

ADVANCED TREATMENTS

Surgery – Lumpectomy, mastectomy, reconstruction

Chemotherapy – We use the newest medications and treatments to fight fast-growing cancers while reducing side effects.

Radiation Therapy – We deliver ultra-precise radiation with speed and accuracy.

Tomotherapy and Trilogy with Rapid Arc –

These state-of-the-art technologies target the tumor while sparing surrounding healthy tissue so you spend less time in treatment and experience fewer side effects.

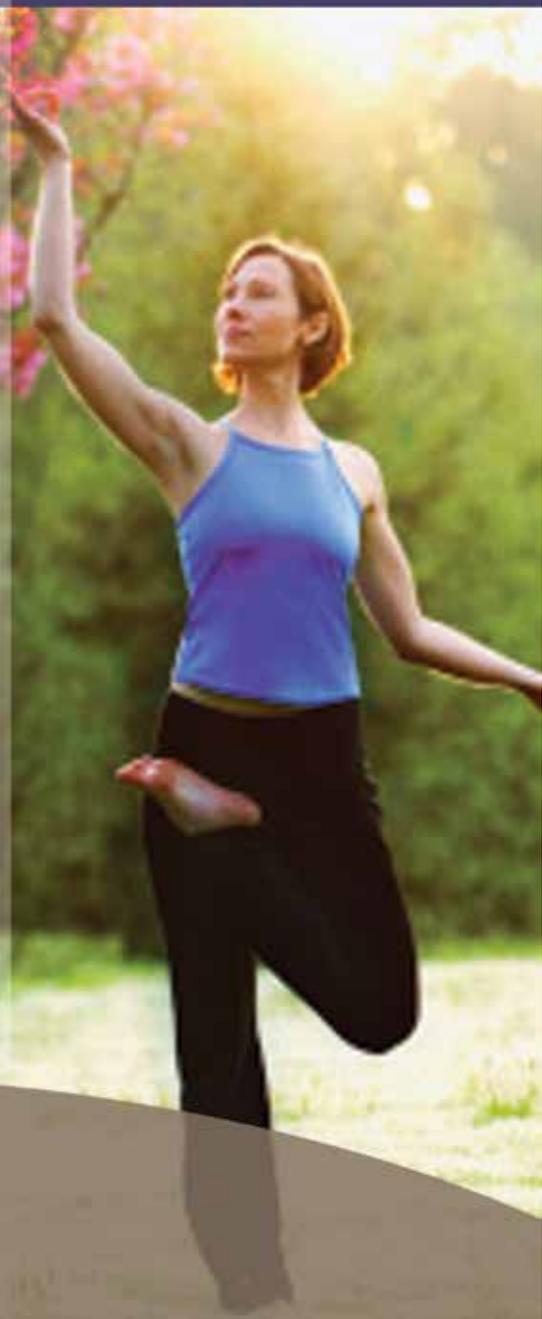

High dose rate (HDR) brachytherapy – Including Accelerated Partial Breast Irradiation (APBI). This innovative internal radiation kills tumors from the inside out, sparing nearby tissue.

Stereotactic Body Radiotherapy (SBRT) – High dose radiation that is delivered in three to five treatments for early stage lung cancer.

Clinical Trials – Access to the most cutting-edge therapies through clinical research studies.
